

A NEW GENERATION OF LAW ENFORCEMENT SOFTWARE

Electronic Imaging

Imaging allows an integrated, encrypted electronic media solution through a Case File, Name File, or Jail Bookings in ARTS. The encryption was written to the NIST (National Institute of Standards and Technology) standards. *Imaging* allows the processing and easy attachment of basically any standard media format, i.e. Digital Photos, audio or scanned statements or as well as any support documents — Video, Audio, 9-1-1 clips, etc.

With a click of the mouse, *images, documents, audio or video files* are easily connected or retrieved from the officer's report, a name or supplemental documents or photos associated with a jail booking. An export utility is also built-in providing users with an extremely easy method of compiling a case and all, or part of, the electronic supplemental data associated with it.

Imaging Features

- Integrated Imaging allows the user to *Add or View or Export* supporting documentation without leaving the application using Agency defined *document types* to organize support documentation, including video, audio or wave files, scanned documents, etc.
- Agency to Agency Security with user defined *Add, Read/View only, Change, Delete* capabilities
- NIST standard encryption
- Conversion from *Paperclip™*
- Conversion from existing ARTS Digital Photo Processing

~ User Friendly Processing ~

- EXPORT capability built in with System narratives & Reports
- Individual or *Batch file* processing
- Import directly from the Camera
- Thumbnail image display
- Individual *Comments* per Image
- Requires ISIS compatible Scanner

ARTS Imaging stores the images, indexes, and Encrypts automatically for *one time handling!*
